In unserer [Online-Buchhandlung](#) werden alle deutschen und englischen Homöopathie Bücher vorgestellt.

[Narayana Verlag](#) ist ein Verlag für Homöopathie Bücher. Wir publizieren Werke von hochkarätigen innovativen Autoren wie [Rosina Sonnenschmidt](#), [Rajan Sankaran](#), [George Vithoulkas](#), [Douglas M. Borland](#), [Jan Scholten](#), [Frans Kusse](#), [Massimo Mangialavori](#), [Kate Birch](#), [Vaikunthanath Das Kaviraj](#), [Sandra Perko](#), [Ulrich Welte](#), [Patricia Le Roux](#), [Samuel Hahnemann](#), [Mohinder Singh Jus](#), [Dinesh Chauhan](#).

[Narayana Verlag](#) veranstaltet [Homöopathie Seminare](#). Weltweit bekannte Referenten wie [Rosina Sonnenschmidt](#), [Massimo Mangialavori](#), [Jan Scholten](#), [Rajan Sankaran](#) und [Louis Klein](#) begeistern bis zu 300 Teilnehmer.

site where tuberculin injection was inserted and made it look red. I then showed the arm to the doctor. He said the colour looked suspicious, but he let me off that time. That was when I was in the final year of my middle school. I still remember it very clearly.

I suffered serious ulcerative colitis subsequently and this disease has tuberculosis miasm at its base. I often wonder, if I hadn't had that many BCG injections, even with the tuberculosis miasm, my UC would not have been so serious. However, if I hadn't had UC, then I would not be standing in front of you today. It was homeopathy that cured my UC and that was why I have taken up homeopathy.

§ The role of preservative and adjuvant in vaccines

Vaccines include preservatives and antibody forming agent (adjuvants). Major substances that are used as preservatives and adjuvant are organic mercury, aluminium hydroxide and formaldehyde. I will talk in detail about antibiotics later.

These substances are highly toxic. Their storage jars

have to be marked with a skull to show the toxicity. And for some reason, these poisons are put in the vaccines. *It* is a shock enough for the body to have pathogens injected directly into the blood system, but as if that is not enough, the body receives these heavy metal and poisons at the same time. You must wonder why, and I will explain it now.

Formaldehyde is included in order to make viruses inactive. Preservatives are put in after the viruses are inactivated. Organic mercury and antibiotics such as streptomycin and erythromycin are used as preservatives. Aluminium hydroxide is put in as an adjuvant, because the body won't react to pathogens on their own. This is why all these poisons are included in the vaccine.

§ Toxic substances in vaccines and their remedy picture

Mercury is associated with Crohn's disease. This remedy complies with anger children get which is out of proportion to the incident in question. The remedy covers allergies, glue ear, autism, autonomic imbalance and so on. These can all be the illnesses of mercury poisoning.

Aluminium is associated with dry skin, constipation, cold-induced urticaria, numbness, apathy, lack of concentration and so on.

Formaldehyde is associated with the feeling of insecurity, heaviness and fuzziness of the head, forgetfulness, asthma and breathing difficulties, loss of taste, parched and aged look to the skin etc. Formaldehyde is also a carcinogenic substance. These symptoms are described in the homeopathic materia medica. Homeopathic materia medica is the study of remedies analogous to toxicology.

§ Vaccination is not a preventative; it is a waste of vital force

If the aim of vaccination is to create antibodies in the body, that is not enough to protect the body from illnesses. Therefore, it would not contribute to the work of what vaccination sets out to achieve. Even if our immune system managed to produce the antibodies, if the bodies cannot eliminate them, then we end up having a lot of antibodies in the body without actually gaining immunity. That is a waste of our vital energy and it also puts unnecessary burden on our immune system. AIDS

is the ultimate result of this situation. AIDS is created in the environment where the body has foreign substance and antibodies trapped in the system and is not able to expel them.

What our bodies end up with after being vaccinated culminates in the following floating in our system - antibody, pathogen and aluminium hydroxide stuck together. If the body cannot eliminate them, they will stay in our blood indefinitely and eventually we have to accept them as part of ourselves. In this way, the illness will become immediately chronic. It is the same as being infected with the disease that the vaccination is supposed to prevent.

So, vaccination is not preventing the disease; counter to this, it actually infects people with the very same disease. Even though people are infected, they will not show the acute symptoms because they are propelled straight into the chronic state. They won't contract the illness that they are vaccinated against, because- how can they when they are already infected with it!

Again, I am not saying this applies to everybody. I am

guessing that among people who do not contract the illness after a vaccination, there may be quite a lot of people who are actually infected with it. But because the illness is pushed down so deep in the system, the body cannot show it in an acute form, and the vital force is too weak to show any kind of symptoms. That is why when I treat patients, the symptoms of illnesses that they could not go through when younger revisit the patients. This happens because the body tries to sort out the disease and complete the cycle again during the homeopathic treatment.

§ Does whooping cough vaccination increase the number of asthmatic children?

For example, what about the cases who have received whooping cough vaccination? Surely, the number of children who fall ill with whooping cough decreases. However, asthma morbidity among children who have been vaccinated becomes five times more than children who have not been vaccinated. What this means is children have contracted asthma instead of whooping cough: they have contracted chronic illness instead of getting the acute symptoms of whooping cough. When the medical establishment says that vaccination is

successful in preventing whooping cough, I'd really like to say "But the illness still exists despite the introduction of vaccination".

And when a person with this kind of ill effect of vaccination has a child, the child is likely to be born with the whooping cough miasm. He or she will have an asthmatic tendency from the birth. The child's system will nevertheless try to deal with this inherited miasm when his/her body becomes strong enough to be able to go through an acute symptom. But this is only if the child him/herself was not vaccinated. If he/she did get whooping cough vaccination, that would strengthen the miasm even further. On top of that, if the child had asthma and it was suppressed with steroids, that will further compromise his/her immune system. Asthma is a type of body reaction against foreign substances. So if that was suppressed, it is as if the body is given another restriction. This means it cannot eliminate anything, which leads to the body carrying all unwanted materials within the system.

The cycle is: Vaccination > atopic dermatitis > steroid > asthma > more steroids > total ruin of immune system ...

this is the route that I have seen in so many cases. If a child were born from a mother whose immune system is totally ruined in this way, then the baby would already have the steroid miasm since the birth. With these types of cases, it is difficult to obtain cure.

§ Increase in heterologous cells leads to autoimmune disorder

I have explained earlier that when a vaccination is given, the body will produce substances that are a combination of antibody, pathogen and aluminium hydroxide in the system. Do you remember what happens if the body cannot eliminate this foreign substance? Yes, it stays in our system. Then what happens is that they start to attach themselves to various parts of our system where the blood flow slows down, for example, settling in various joints, heart valves and internal organs. Then the genes of the cells to which these foreign substances attach become deformed, creating heterologous cells. As they multiply, the body will have more and more heterologous cells.

Heterologous cells mean foreign substance to the body. So the immune system recognises them as foreign, and
